Release 1.8.0

- **WICORE-539 - Found column change to Vulnerabilities**

- **WICORE-626 - Bulk Selection for Reports**

- A new checkbox column has been added to the leftmost side of the reports table, allowing multiple reports to be selected and updated in bulk where applicable.

- **WICORE-584 - Added Day & Time to "Created" Column**

- The "Created" column now displays both the date and time.

- **WICORE-575 - Malware Reports: Filters & Sorting**

- Improved filtering and sorting, including a new **found/not found** status filter for malware reports.

- **WICORE-573 - Updated Project Column Position**

- Adjusted the position of the **Project** column in several Security MS tables for better visibility.

- **WICORE-608 - Expanded "Close" Drawers in Incident Reports**

- The **Close** drawer in **Incident Reports** has been widened, and internal content has been repositioned for better readability.

Release 1.9.0

Features:

- **WICORE-671 - Migrated Logger to Winston**
 - The **logging system** has been updated to use **Winston**, improving log handling.
- **WICORE-781 - Snyk Fix for 20 Vulnerabilities (Security MS UI)**
 - Addressed **20 security vulnerabilities** in the **Security Microservice UI** using **Snyk**.
- **WICORE-732 - Snyk Fix for 12 Vulnerabilities (Facade)**
 - Resolved **12 vulnerabilities** in the **Facade layer** to improve security.
- **WICORE-693 - Updated Violation Reports Form**
 - The **Violation Reports** form has been modified for **better usability and structure**.
- **WICORE-692 - Kanban Board for Violation Reports**
 - Introduced a **Kanban board** approach for managing **Violation Reports**, making tracking and processing more intuitive.
- **WICORE-820 - Widen View Drawer in Completed State (Security MS)**
 - Increased the width of the view drawer in the completed state of the Security MS module for better readability and layout.

Bugfixes:

- **WICORE-797 - Fixed Image Uploads in TinyMCE Editors**
 - Resolved an issue where images uploaded via TinyMCE editors in the Security microservice were not being sent to the server, causing errors. Images now upload and display correctly.

- **WICORE-706 – Improved HTML Rendering in Incident Report Drawer**

- Fixed incorrect display of HTML tags in the Security view drawer by rendering content using `dangerouslySetInnerHTML`, ensuring proper formatting and readability.

- **WICORE-859 – Violation Reports: Entities Not Displaying in Table**

- Fixed an issue where violation report entries were not appearing in the table despite being present in the backend.

- **WICORE-858 – Violation Reports: Check Sorting**

- Improved and corrected sorting functionality within the violation reports table to ensure proper ordering of data.

- **WICORE-830 – Violation Reports: Create/Edit Drawer Display Issue**

- Resolved a problem where the Create/Edit drawer was not opening correctly in the Violation Reports module.

Release 1.10.0

Features:

- **WICORE-898 – Penetration Reports: View Drawer on Name Click**

- Clicking on a report name in the Penetration Reports module now opens a drawer with report details.

- **WICORE-894 – Open Drawers on Title/Name Click**

- In the Violation Reports and Incident Reports modules, clicking the Title or Name now opens a detailed drawer.

- **WICORE-893 – Link Penetration Events to Violation Reports**

- Violation Reports can now be linked to penetration events. A collapsible list in Penetration Reports shows associated violation entities.

- **WICORE-892 – Allow Deletion of Violation Reports**

- Users can now delete violation reports.

- **WICORE-891 – Update Layout of Incident Report View Form**

- Field labels are now displayed above each field instead of beside them.

- **WICORE-890 – Wider Drawers in Security Modules**

- All drawers are now expanded to use 50% of the screen width for better readability.

- **WICORE-889 – SLA Field Locked After Creation**

- The SLA field in incident reports becomes non-editable after report creation.

- **WICORE-888 – SLA Field Visual Status**

- The SLA field turns red if the deadline is past; otherwise, it remains styled like regular fields.

- **WICORE-887 – Remove Penetration Field from Incident Reports**

- The Penetration field has been removed from the Incident Reports module.

- **WICORE-886 – Allow Deletion of Incident Reports**

- Users can now delete incident reports.

Bugfixes:

- **WICORE-861 – Fix Search Functionality in Violation Reports**

- The search input in the Violation Reports module now works correctly.

Release 1.11.0

Features:

- **WICORE-1063 - Malware Reports: Combine "Server Name", "Scan Type", and "Status" Fields into One Row**

- UI improvement in the Malware Reports module: the fields "Server Name", "Scan Type", and "Status" are now displayed inline in a single row for a more compact and user-friendly layout.

- **WICORE-1062 - Malware Reports: Expand Text Area Field**

- The text area field in Malware Reports has been increased in height to allow users to view the full content without the need for scrolling or resizing the field.

Bugfixes:

- **WICORE-1061 - Incident Reports: View Drawer Field Issues & Enable Edit After Completion**

- Fixed layout and rendering issues in the view drawer of the Incident Reports module. Additionally, users can now edit completed reports by clicking the edit icon, allowing post-submission corrections when necessary.

- **WICORE-1060 - Remove "Lesson Learned" Column from Incident Reports Table**

- The "Lesson Learned" column has been removed from the main table view in the Incident Reports module to reduce clutter and focus on more relevant information.

- **WICORE-1059 - Check Column Overflow for Names and Titles**

- Standardized column widths across all reports to prevent overflow issues. Fields containing names and titles will now wrap or truncate gracefully to maintain clean layouts.

- **WICORE-1056 - Fix Sorting Logic in Severity Column**

- Corrected the sorting behavior of the “Severity” column across reports, which previously did not sort values as expected (e.g., by severity level order).

• **WICORE-1055 - SLI Field Marked as Required**

- The SLI (Service Level Indicator) field is now visibly marked as required in all applicable forms, ensuring users don't skip this critical field during data entry.

• **WICORE-1054 - Add Translations for VCSSv3 in Violation Reports Module**

- Introduced translations for all VCSSv3-related elements in the create, edit, and view drawers of the Violation Reports module to improve localization support.

• **WICORE-975 - Violation Reports: Summary Not Required for Status Change**

- Improved UX logic so that when users update only the status of a violation report during editing, the "Summary" field is no longer required unless changes to the report content are made.

• **WICORE-895 - SLA in Violation Reports**

- Introduced proper handling and visual display for SLA (Service Level Agreement) in Violation Reports. SLA deadlines are now more clearly shown and managed.

Release 1.12.0

Bugfixes:

- WICORE-1161 - Issue with tineMCE in Security MS

Release 1.13.0

No changes

Release 1.14.0

Features:

- WICORE-710 - CRM Tables: highlight a row on focus
- WICORE-1204 - Change text to make the message unclear
- WICORE-1147 - Ability to upload PDF of resolved incident report
