

Release 1.2.0

Features:

- **WIBR-279 - Decimal Precision Configuration for Currencies**
 - Implemented the ability to configure the number of decimal places for each currency separately.
- **WICRM-383 - Company Fees "Apply For" Property and Payment System Compatibility**
 - Added the "applyFor" property to company fees and ensured compatibility with different payment systems.
- **WIBR-276 - Bonus Feature for Deposits and Withdrawals**
 - Implemented a bonus balance feature for deposits and withdrawals, with the bonus amounts tracked in a separate column.
- **WIBR-254 - Default Currency Option in Core Banking Configuration**
 - Added the ability to mark a default currency in the Core Banking configuration settings.
- **WICRM-393 - Manager Column in Transactions Table**
 - Added a new column to the transactions table that displays the manager responsible for each transaction.

Bugfixes:

- **WICRM-376 - Undefined Header in Transaction History**
 1. Fixed an issue where the transaction history header would display as "undefined" after a page reload.
