

# Release 1.2.0(23.10.2024)

## Features:

- **WICRM-370 - Postback Logic for Buckets**
  - Implemented postback functionality for Buckets, allowing automatic HTTP requests to be sent after a user registers or makes their first payment.
- **WICRM-374 - Automation Rules for Buckets**
  - Added automation logic for Buckets based on user registration time and traffic source. When a user matches an automation criterion, they are moved to the designated desk.
- **WICRM-381 - Configuration Tab UI for Buckets**
  - Completed the UI design for the Configuration tab within the Buckets module.
- **WICRM-373 - Time Range Picker & Automation Tab UI Updates**
  - Updated the Automation tab UI and added a time range picker for more flexible automation settings.
- **WICRM-379 - Search by Employee ID**
  - Added the ability to search by employee ID in the system.
- **WICRM-338 - Validate Environment Variables During Setup**
  - Added validation for environment variables during the system setup process to ensure all necessary configurations are in place.
- **WICRM-391 - Buckets Automation Code Refactor**
  - Refactored the automation code within the Buckets module for better structure and maintainability.
- **WICRM-402 - Root User Access to Buckets**
  - Granted root users access to all functionalities within the Buckets module.
- **WICRM-397 - Add Hours and Minutes to Datepicker in Client Actions**
  - Enhanced the client actions datepicker to allow more precise date selection by including hours and minutes.
- **WICRM-396 - Main Section for Buckets**
  - Implemented the main UI for the Buckets module, where users can view, edit, delete, and manage Buckets, as well as see source-related information.
- **WICRM-399 - Remove Mandatory Fields in Request Creation Form**
  - Removed all mandatory fields from the request creation form, allowing for more flexible submissions.
- **WICRM-401 - Automation Tab UI for Buckets**
  - Designed the UI for the Automation tab in the Buckets module.
- **WICRM-405 - Chrome API Account Login Storage**
  - Enhanced login functionality, storing account data using the Chrome API for more seamless future logins.

- **WICRM-85 - Leads List UI in Buckets**
  - Completed the UI design for the Leads list in the Buckets module.
- **WICRM-398 - Authentication Required for Registration Endpoint**
  - Enforced authentication via identification tokens for Open API requests to the registration endpoint.
- **WICRM-404 - Navigation Update: Buttons Replaced with Links**
  - Replaced buttons with links across the system, allowing users to open pages in new tabs or windows, improving flexibility.
- **WICRM-51 - Favorite Clients UI**
  - Developed the UI for the Favorite Clients feature, allowing managers to easily monitor key clients without searching through the entire list.
- **WICRM-408 - Employee Calendar for Client Actions**
  - Added an employee-specific calendar that tracks all client-related actions, displaying them immediately upon creation.
- **WIBR-190 - Enhanced Client Documents Display**
  - Updated the client documents section to show a full list of all uploaded documents, instead of just a single entry.
- **WICRM-419 - Buckets Header UI**
  - Designed the UI for the header in the Buckets module.
- **WICRM-421 - Placeholder Display When No Data Available**
  - Implemented a placeholder message for instances where no data is available.
- **WICRM-416 - Dashboard Logic for Buckets**
  - Implemented the backend logic for the Dashboard tab in the Buckets module, enabling the display and functionality of metrics and insights related to Buckets data.
- **WICRM-413 - Dashboard Markup**
  - Created the frontend markup for the Dashboard in the Buckets module, laying out the visual structure for displaying key statistics and metrics.
- **WICRM-438 - Display Next Fields in Clients' Table**
  - Updated the Clients table to display additional fields that were previously hidden or unavailable, improving the visibility of important client information.
- **WICRM-440 - Add Backend Logic for Resolving Chart Data "By Sources" in Bucket's Dashboard**
  - Implemented backend logic to populate and resolve chart data in the Buckets Dashboard, particularly focusing on grouping data "By Sources" for detailed insights.
- **WICRM-441 - Add Scroll Without Tabs to Buckets Dashboard, Issues with Markup, Filters**
  - Enhanced the Buckets Dashboard to allow scrolling without switching between tabs. Also addressed layout issues with the markup and filters in the Dashboard.
- **WIBR-290 - Add Possibility to Add Client Documents via CRM**
  - Added functionality allowing users to upload and manage client documents directly within the CRM system.
- **WIBR-300 - Add lastLoginIp and lastLoginDate Keys to Clients Model**
  - Enhanced the Clients model by adding `lastLoginIp` and `lastLoginDate` keys, providing better tracking of client login activity.
- **WICRM-430 - Ability to Search for Employees by Various Criteria**

- Added a search functionality that allows users to find employees based on various criteria, improving efficiency in locating specific staff members.
- 

## Bugfixes:

- **WICRM-378 - Select Options Should Not Depend on Translations**□
  - Fixed the issue where select options were incorrectly dependent on translations.
- **WICRM-380 - Default Request Status in Open API**□
  - Ensured that requests created via Open API were assigned the default status configured in the CRM settings.
- **WICRM-377 - Prevent Access to Employee Pages Without Action URL**□
  - Fixed a security issue where removing the action from the employee page URL still allowed access to the page.
- **WICRM-372 - Export Button Alignment Issue**□
  - Fixed the gap between the export button and the rest of the UI.
- **WIBR-195 - Document ID Not Saved During Profile Edit**□
  - Added the Document ID field to the client profile form to ensure proper saving of passport details.
- **WIBR-224 - Session Timeout Alignment Between CRM and Facade Tokens**□
  - Fixed an issue where session timeout durations were inconsistent between CRM and facade tokens.
- **WICRM-403 - Prevent Access to Client Pages Without Action URL**□
  - Addressed a security issue where users could access client pages even after removing the action from the URL.
- **WICRM-386 - Bank Selection Issue During Asset Creation**□
  - Fixed an issue preventing bank selection during the asset creation process.
- **WICRM-406 - Prevent Access to All Modules Without Action URL**□
  - Fixed security loopholes across all modules where users could access pages without the required action in the URL.
- **WICRM-387 - Trim Whitespace When Pasting IP into Whitelists**□
  - Fixed an issue where whitespace around pasted IP addresses in whitelist fields was not being trimmed.
- **WICRM-411 - Employee Password Not Saved if Field is Empty**□
  - Fixed an issue where an empty password field during employee profile editing would result in an incorrect password being saved.
- **WICRM-427 - Z-index Conflict with Favorite Clients in Clients Module**□
  - Resolved a z-index conflict causing the Favorite Clients window to overlap incorrectly with other windows.
- **WICRM-434 - Root User Unable to See Duplicate Actions**□
  - Fixed an issue where root users could not see duplicate actions in the Clients module.
- **WICRM-429 - White Screen on Duplicate Action in Clients Module**□
  - Fixed an issue causing a white screen when attempting to use the duplicates feature in the Clients module.

- **WICRM-420 - Change Errors for Buckets**□
    - **Modified and improved the error messages related to Buckets to provide more detailed and user-friendly feedback.**
  - **WICRM-439 - User Is Not Logged Out When Editing Bucket ID in Page URL**□
    - **Fixed an issue where users were not logged out of the system when manually editing the Bucket ID in the page URL, ensuring data protection.**
