

Release 1.3.0(31.10.2024)

Features

- **WICRM-448 - E2E Testing Infrastructure**
 - Implemented an end-to-end testing framework to support automated testing across modules. This infrastructure aims to enhance the testing coverage and speed, enabling more efficient and comprehensive system validation.
 - **WICRM-456 - 'Leads Signed-Up' Block Redesign**
 - Redesigned the "Leads Signed-Up" block in the Buckets dashboard to improve information clarity and visual hierarchy, making it easier for users to analyze lead data at a glance.
 - **WICRM-455 - New Icons for Favorites Modal**
 - Introduced updated icons for the Favorites Client modal window, providing a more modern and visually cohesive user experience that enhances navigation within the modal.
 - **WICRM-454 - Client Password Change**
 - Added a feature allowing client managers to change clients' passwords directly within the client profile form. This functionality is accessible to managers with specific permissions, enhancing account security and management control.
 - **WICRM-469 - Nonvisible Bucket Lead Actions Disabled**
 - Updated bucket lead actions so that icons for assigned actions remain visible but are inactive after completion, ensuring clearer user interaction and feedback.
 - **WICRM-463 - Stay on Client Profile Page Post-Edit**
 - Updated client edit workflow to keep users on the client's profile page after saving changes, avoiding redirection to the main user table and improving manager productivity.
 - **WICRM-466 - Employee Calendar Markup**
 - Created UI elements for an action calendar specific to assigned employees, providing a structured interface for scheduled tasks and events.
-

Bugfixes:

- **WICRM-445 - Role Name Character Limit**
 - Adjusted the role name character limit by reducing the minimum length to two, allowing for simpler and more flexible role naming within the system.
- **WICRM-431 - Action Save Error in Client Module**
 - Resolved an issue where the "action" drawer in the client module lacked error messages for required fields. Now, when a required text area is left blank, an error is

displayed, ensuring users understand why the action cannot be saved.

- **WICRM-450 - Email Field Validation for Submit Button** □

- Fixed the validation logic for the password reset email field so the submit button remains inactive until a valid email address is entered. This update prevents incomplete or incorrect requests and enhances form accuracy.

- **WICRM-462 - Double Minus Sign Issue in API Transaction Entries**

- Fixed a bug where the minus sign in the amount field wasn't processed correctly via OpenAPI, resulting in double minus signs in transaction tables.

- **WICRM-460 - Remove 'Source' Field Requirement for Transactions**

- Updated transaction creation requirements by removing the 'Source' field as mandatory, increasing flexibility for users creating new transactions.

- **WICRM-457 - Label Validation Fix**

- Resolved a validation issue in the translations module that prevented editing or creating translations with separators, ensuring smooth entry and editing functionality.
