

Release 1.8.0

Features:

- **WICORE-561 - Removed validation for employee name**

- The employee name validation has been removed, simplifying the process of creating and managing employee entities.

- **WICORE-551 - Chain SecurityMS modules to Project module in rights**

- The issue where rights for SecurityMS wouldn't automatically include rights for projects has been fixed. Now, enabling rights for SecurityMS will automatically enable the required project rights.

- **WICORE-544 - Added clear translations and text deltas for WTCS solution**

- Implemented clear translations and deltas for WTCS to ensure all text was updated and consistent.

- **WICORE-537 - Added sidebar ranking functionality**

- This update allows you to configure the sequence of sidebar menu entities programmatically.

- **WICORE-536 - Updated notification logic to include client names**

- Notifications have been updated to include client names, improving clarity in notification logs.

- **WICORE-533 - Added password generation functionality for clients and employees**

- Introduced a feature that allows automatic password generation for clients and employees.

• **WICORE-529 - Added employee types**

- The employee types have been defined as: "Manager," "Sales," "Analytics," "Support," "Presale," and "Affiliate."

• **WICORE-514 - Separated internal and public pages in VCS**

- The internal and public pages within the VCS have been separated for better organization and clarity.

• **WICORE-512 - Added support for Greaptcha in internal resolvers and Open API**

- GreCaptcha has been integrated into internal resolvers and Open API to enhance security.

• **WICORE-482 - Added custom logic to QMS as in WTCS**

- Custom logic similar to WTCS has been added to the QMS system to improve functionality.

• **WICORE-389 - QMS Pages (Feedbacks and Complaints)**

- Developed pages for managing feedbacks and complaints within the QMS system, enhancing customer feedback management.

• **WICORE-624 - Default Session Time Input**

- If session time is not configured in security settings, a default value will now be pre-filled in the input field.

• **WICORE-595 - Updated "Meta" Translation in Forms**

- The term "**Meta**" has been changed to "**Additional**," and an info icon with a popover description has been added for clarity.

• **WICORE-594 - Updated Text and Translations in Main Database**

- Various text corrections and translation updates were applied across the system.

• **WICORE-585 - Updated Project Name & Key Validation**

- The validation for project name and key fields has been updated:
 - Minimum: **2 characters**
 - Maximum: **64 characters**

• **WICORE-583 - Documents Now Configurable by Client Type**

- Verification document selection has been moved from general settings to the **Clients Types** tab, allowing per-client-type configuration.

• **WICORE-582 - General Settings Moved to Security Module**

- The **General** tab from settings has been relocated to a dedicated section in the **Security** module.

• **WICORE-577 - Info Icons for Core & CA Configuration Points**

- Added informational popups for each configuration point in **Core and CA** sections.

• **WICORE-515 - Log Filtering by Entity ID**

- A new filter has been added to the **General Logs** page, allowing logs to be filtered by **Entity ID**.

• **WICORE-635 - Implemented Query-Based Webpack Configurations**

- Support for **query-based** configuration adjustments was added in Webpack.

• **WICORE-611 - Date & Time in Client Actions History**

- The format across **Client Actions History** has been updated to include both **date and time** for better tracking.

• **WICORE-610 - "Data Difference" Drawer for Logs (Create Action Type)**

- A new **Data Difference** drawer has been added to logs for "**Create**" actions, displaying details about newly added entities.

• **WICORE-600 - Default Manager Selection in Client Actions**

- When creating a new **Client Action**, the **Manager** field will now default to the currently logged-in manager.

Bugfixes:

- **WICORE-570 - Fixed issue where the template field in the roles module was not resetting after saving**

- The bug was fixed where deleting a template role wouldn't remove it, and it stayed visible. Now, you can properly remove or change template roles from the available options.

- **WICORE-563 - Fixed deposit issue where the application logs out on submitting**

- Resolved a bug where clicking the submit button on the deposit form triggered an unintended logout.

- **WICORE-565 - Added `{ isPolling: true }` to the `getNotifications` resolver to fix the token refresh issue**

- This change ensures that the application token doesn't refresh during polling of the notification service, preventing unwanted logouts.

- **WICORE-542 - Fixed drag & drop issue on the clients columns drawer**

- The issue with the drag & drop functionality in the clients columns drawer has been resolved, improving user experience.

- **WICORE-541 - Fixed account type issues when creating an account on the Clients tab**

- Resolved issues where account types were incorrectly assigned or not selectable during account creation in the Clients tab.

- **WICORE-452 - Fixed issues with ellipsis in the UI**

- Resolved issues related to the use of ellipsis in UI elements where content was being cut off incorrectly.

- **WICORE-604 - Fixed Employee Visibility Across Projects & Desks**

- Employees from desks not linked to the user's project will no longer be visible. Previously, users with access to Project A and Desk B could still see employees from Desk C, which has now been corrected.

- **WICORE-632 - Reverted ID Cache Strategy Due to Balancer Issue**

- An issue with cache strategy caused the CRM to fail loading properly. The previous strategy has been restored to ensure stability.

- **WICORE-572 - Updated Pipeline Automation Translations**

- Improved translations for text in the **Automation** section of the Pipelines module.

- **WICORE-576 - Removed Scroll Arrows for Small Lists**

- Horizontal scroll arrows will no longer appear if a list contains fewer than 5 items.

- **WICORE-438 - Resolved Cache Issues in Core CRM & Microservices**

- Fixed caching problems that were causing website performance issues in the **Core CRM** and other microservices.
