

# 1. Projects: Overview

The **Projects** module is the foundational container in Wifox Business Core Solution. Every record you create under Projects represents a discrete business unit—whether that’s a corporate office, a website, a geographic region, or a product line. Projects isolate data (Desks, Clients, Employees, financials, support tickets, etc.) so that each team only sees the records relevant to their scope of work.

## Default Project

Upon first login, you’ll see a **Default** project (with one default Desk). Use this for testing or small-scale operations.

## Unlimited Projects

Create as many Projects as your organization needs—each with its own:

1. **Desks** (structural units)
2. **Clients** (customer records)
3. **Employees** (system users)
4. **Sub-modules** (Affiliate Hub, Actions, Requests, Core Banking, etc.)

## Access Control

All permissions (view own/all, manage own/all) are scoped at the Project level and inherited by underlying Desks, Clients, and sub-modules. Without at least one active Project, no other CRM functions can be used.

The following actions are available in the Projects module:

1. [Creating](#)
2. [Editing](#)
3. [Deletion](#)
