1. Menu Section: Overview

The Menu section in Wifox Business Content Solution allows you to manage the structure and content of navigation menus for your website. It provides a tree-based view where users can create, edit, and organize menus and submenus, ensuring that site navigation is intuitive and user-friendly.

For example, menus are categorized into different sections such as the Main Menu, Footer Menu, and other custom menus (e.g., About Menu). Each menu item is associated with a label, URL, and sometimes a hierarchy for grouping related links.

Key Features of the Menu Section

- **Tree View Structure:**

image not found or type unknown ??? ?????, ?????? ??????, ??????, ??????????

Displays menus in a tree format, allowing users to visualize the hierarchy of menu items and their

submenus.

Main Menu: /main

Footer Menu: /footer

About Menu: /about

- **Save and Add Options:**

1. **Save:** Finalize changes made to the menu.

2. **Add:** Add new menu items or submenus to the desired section.

Hierarchical Organization: Each menu can contain multiple sections, like **About**, **Explore**, and **Legal & Policies**, which further include submenus linked to specific pages.

2. Use Cases

1. For Website Menus (Header, Footer, Additional Menus)

- **Use Case #1: Structuring the Main Menu**

Businesses can organize their header navigation with primary categories such as Home, Services, Products, and Contact.

For e-commerce websites, group options like "Shop by Category," "New Arrivals," and "Sales" under dropdowns to streamline the shopping experience.

Example: A travel agency might include "Destinations," "Tours," and "Travel Tips" in its main menu.

- **Use Case #2: Customizing Footer Menus**

Add links to secondary content, such as Terms & Conditions, Privacy Policy, Careers, and FAQ, in the footer menu.

This keeps the main navigation clean while ensuring users can still find crucial resources.

Example: A tech company could include "Investor Relations" and "Press Releases" in the footer.

- **Use Case #3: Organizing Additional Menus**

Use custom menus for targeted sections, such as blogs, galleries, or resources.

Example: A non-profit organization might create an "About Menu" with links like "Our Mission," "Leadership," and "Impact Stories."

2. For Shop Categories and Breadcrumbs

- **Use Case #4: Creating Shop Categories**

Categorize products by type, purpose, or brand using menus that integrate seamlessly with e-commerce platforms.

Example: A fashion retailer could group products under "Men's Wear," "Women's Wear," and "Accessories."

- **Use Case #5: Managing Breadcrumb Navigation**

Use hierarchical menus to auto-generate breadcrumbs for better user navigation and SEO benefits.

Example: In an electronics store, breadcrumbs might display: Home > Electronics > Smartphones > Brand Name.

3. For User-Specific Navigation

- **Use Case #6: Personalized Menus for Different User Groups**

Create custom menus for different user types (e.g., "For Brokers," "For Affiliates").

Example: A financial service platform can have separate menus for "Individual Investors" and "Corporate Clients," each featuring tailored resources.

- **Use Case #7: Supporting Multilingual Websites**

Build separate menus for each language, allowing global businesses to cater to diverse audiences.

Example: A global news website might offer menus in English, Spanish, and French, each localized for regional content.

3. How to Add a New Menu or Menu Item

1. **Click Add:** Click the "+" button at the top-right of the Menu section.

image not found or type unknown?? ?????, ?????? ??????, ?????, ???????????????????

2. **Enter Details:**

image not found or type unknown?? ?????, ?????? ??????, ?????, ?????????????????'

- **Label:** Provide a label for the menu or item (e.g., "Contact Us").
- **URL:** Enter the URL where the menu item should link (e.g., /contact-us).
- **Parent Menu:** If adding a submenu, select the parent menu (e.g., add "Contact Us" under "Legal & Policies").

3. **Save:** Click **Submit** to apply changes.

4. Save entire menu updates by clicking "**Save**" at the top right corner of the Menu page

4. How to Edit or Delete a Menu Item

1. Locate the menu or submenu you want to modify in the tree view.

2. **Edit:** Click the **Edit Icon (Pencil)** to update the label or URL of the menu item.

image not found or type unknown?? ?????, ?????? ??????, ?????, ??????????

3. **Delete:** Click the **Delete Icon** to remove the menu or submenu.
