

1. Customers: Overview

The **Clients** section in Wifox Business Content Solution is designed for managing client data efficiently. This feature allows administrators to create, edit, and delete client profiles, which can be used to store important information or dynamic data for clients. It is particularly useful for organizations that want to use the system as a client management tool.

Key Features of the Customer Section

1. Client Creation

Add a new client by specifying details such as:

- **Email**
- **Password**
- **Name**
- **Phone Number**

Optionally, you can set dynamic data in the **Properties** section for additional customization.

2. Edit Client Details

Modify existing client information, such as their email, name, or phone number.

Update the **Password** or **Active** status as required.

Add comments or adjust the **Properties** field for dynamic data storage.

3. Delete Clients

Remove a client profile when it is no longer needed.

4. View and Manage Properties

Use the **Properties** section to append or modify dynamic data related to a client.
