

# 1. Text Fragments: Overview

The Text section in Wifox Business Content Solution is designed to manage textual content that is used across different parts of a website or platform. It acts as a repository for reusable text elements such as descriptions, headings, FAQs, and informational blurbs. This centralized structure ensures that text is consistent, easily accessible, and modifiable when necessary.

Each text entry is defined by a Label, a Title, and its associated Content. These texts can be quickly edited, duplicated, or deleted, providing a streamlined workflow for managing website copy.

The following actions are available in the Desks module:

- [Adding](#)
- [Editing](#)
- [Deletion](#)
