

1. User Management: Overview

The User Management section in Wifox Business Content Solution provides tools for managing both user accounts and role-based permissions. In the **Users** section, administrators can create, edit, and activate/deactivate user accounts, each tied to a specific role. The **Roles** section allows for defining custom access levels using Read-Only (RO) or Read-Write (RW) permissions across different modules, ensuring secure and tailored access control for every team member.
