

# 3. Use Cases

## **Use Case #1: Consistent Website Messaging**

The Text section can store and manage content used on multiple pages, ensuring uniform messaging across the website. For example, a company overview or tagline can be stored here and used on the homepage, about page, and landing pages.

## **Use Case #2: Quick Content Updates**

Instead of manually updating text in multiple places, changes can be made directly in the Text section, and those updates will reflect wherever the text is used. For instance, if the "Overview of Financial Commission's Compensation Fund" description changes, the updated text is automatically applied across all relevant pages.

## **Use Case #3: FAQ Management**

Store FAQ entries as individual text items. This approach makes it easy to add, edit, or remove frequently asked questions without navigating through page content.
